Sitecore Habitat

Habitat is an example Sitecore solution built on the Helix architecture principles. It is designed to show how a Helix-based solution can be architected, and to demonstrate how tooling can be used to accomplish publishing, serialization, and testing. Habitat **is not intended** to be a starter solution, or as a recommendation of tools for your solutions.

The architecture and methodology focuses on:

- Simplicity - *A consistent and discoverable architecture*
- Flexibility - *Change and add quickly and without worry*
- Extensibility - *Simply add new features without steep learning curve*

For getting started, please check out the Documentation.
For more information on **Helix**, please go to helix.sitecore.net.

For more information about the architecture and the principles and conventions behind it, please see the Sitecore Helix guidelines
